

Create, Curate and Connect: Why Digital Portfolio Matters

If COVID has taught us anything about education, it is that schooling is so much more than content from a textbook or tests. Deep learning occurs when students are empowered to reflect on what they have learnt, their next steps, who they are as people all while “showing what they know” in ways that extends beyond their classroom or school.

This webinar will provide parents and caring adults at home with insight into why digital portfolios matter in school and beyond.

By creating digital portfolios at home or at school, young people can learn how to use social media responsibly all while learning transferable digital skills as they embrace the power in sharing their story with the world.

Brightspace by D2L: The Basics

This webinar will introduce parents and caring adults at home with the basic functionality of Brightspace by D2L. Brightspace is the Ministry of Education’s officially licensed Virtual Learning Environment. Available to every school board across Ontario, many teachers use Brightspace by D2L to facilitate virtual learning.

This webinar will provide an overview of key functionality so parents and caring adults can support their children at home.

Google Classroom: Extension Power

Many students across Ontario are using Google Classroom as part of remote learning. From Slides to Jamboard, Google Apps For Education provides teachers and students with many unique tools. This webinar will introduce parents and caring adults to key functionality of Google Extensions to support learning at home.
